DTM has been tracking climate-induced displacement across the central and southern regions of Iraq since June 2018. Drought, land degradation and increased salinity in important rivers and tributaries continue to place a strain on the agriculture, livestock herding and fishing industries, with many families unable to guarantee sufficient and sustainable livelihoods in rural areas. DTM’s tracking of climate-induced displacement aims to provide data on the number and location of vulnerable families forced to displace due to climatic and environmental factors.

Data collection for this update took place between 1 and 15 March 2023. Data are collected through IOM’s Rapid Assessment and Response Teams (RARTs), who are deployed across Iraq (21% of enumerators are female). IOM’s RARTs collect data through interviews with key informants utilizing a large, well-established network of over 9,500 key informants that includes community leaders, mukhtars, local authorities and security forces.

As of 15 March 2023, 12,212 families (73,272 individuals) remain displaced because of drought conditions across ten governorates. Of these, 4,659 families are displaced within their district of origin (38%). The displaced families are dispersed across 347 locations, with the majority (76%) being urban locations.

The top governorates of origin are consistent with those observed in the previous round (December 2022), namely Thi-Qar (3,887), Missan (3,520), Qadissiya (1,596) and Muthanna (1,411). At the district level, Al-Shatra in Thi-Qar governorate has the largest number of families displaced by water scarcity (2,262). Other districts with significant climate-induced displacement include Qal’at Saleh district in Missan governorate (1,885 families), Afaq in Qadissiya governorate (1,488 families) and Nassriya in Thi-Qar governorate (1,020 families). Many of those displaced reportedly worked in agriculture, livestock rearing and fishing livelihoods.

Map 1: Top 15 climate-induced displacement flows in central and southern Iraq

The map depicts the top 15 flows from their district of origin to their district of displacement. Intradistrict displacement is shown as a circular arrow.
The number of families in climate-induced displacement expanded in this round as key informants referred RART teams to previously unassessed locations of displacement. This was most notable in Muthanna and Missan governorates, where 33 and 18 new locations were assessed, respectively. The number of locations and climate-displaced families is expected to increase each round as the network of key informants expands. However, the continual increase in families also suggests such movements are permanent, rather than seasonal.

Missan governorate hosts the largest number of families experiencing climate-induced displacement (3,234), followed by Najaf (2,736) and Thi-Qar governorates (1,890). In Missan governorate, districts hosting high numbers of displaced families include Amara district, which hosts 2,541 families, primarily originating from Qal‘at Saleh (63%). In Najaf governorate, most families are in Najaf district (2,716). In Thi-Qar Governorate, Al-Shatra district hosts 990 families, all of whom were displaced within their district of origin. This round, RARTs reported that in Najaf governorate, some families from different governorates were blocked from entering.

Map 2: Districts hosting families affected by climate-induced displacement
